BASEBALL DIRECTORS MEET.

Looks Like a Scrap Between Mag-Nats and Players.

New York, Dec. 11.—The board of directors of the National Baseball league met today to make any possible changes in the salary and "farm" of the club owners. Now we will have something to say.

Mr. Zimmer of the Players' association said today: "Every player in the National league is not a sign a contract. And we don't propose to make any more. The salary and 'farm' of the club owners. Now we will have something to say."

Mr. Zimmer said his committee would go to Philadelphia today for a conference with Dan Johnson and the American league representatives.

It was announced by President Young that after the meeting of the board of directors today, the American league representatives will be in the city to make any possible changes in the salary and "farm" of the club owners. Now we will have something to say.

DISPUTE ON WEIGHTS.

"Aggies" Want a Game With the University.

(Special Correspondence.)

Logan, Dec. 11.—The statements of the A. C. team that they are going to play the University of Utah tomorrow are being questioned by the Aggies. The Aggies are in 12 pounds, and the Christians are in 14 pounds. The Christians stated that when they played the University of Utah, they were never in it so far as scoring was concerned, and they would have been beaten in a decisive way. The Aggies are in 12 pounds, and the Christians are in 14 pounds. The Christians stated that when they played the University of Utah, they were never in it so far as scoring was concerned, and they would have been beaten in a decisive way.

The students were "Real Horrid."

(Denver Night.)

The East Denver school football team will never wander so far from home. Professor William Smiley, the principal of the school, said that the team could not go out of the state again.

When asked his reason for issuing an order, Mr. Smiley said: "There are many good teams in and around Denver, and I do not believe that it is necessary for the team to go so far away."

The boys say there are other reasons, but they refuse to state what they are.

The real reason, however, is the boys do not believe themselves while in Salt Lake a few weeks ago. In fact, they said the boys were "real horrid."

They had what they called a "real good time," but Professor Smiley heard, and from them, that the conduct of some of the boys was "disgraceful."

Fire Laddies After Blue Coats.

(Editorial.)

Dear Sir:—Believing that the members of the fire department are physically better than the members of the legislature, we have decided to make a game of football, to take place on Christmas day, the home team to furnish a Christmas dinner to the victors. We would suggest that Jim Williams play the position of center, as we think our Laddies' staff can buck him to a finish. Yours very truly,

M. W. EARL,
Captain Fire Department.

Cycling.

SIX-DAY BIKE RACE.

Passed the Thousand Mile Mark in Record Time.

New York, Dec. 12.—With the thousand mile mark by a score of miles ahead of the six-day bicycle riders in Madison Square Garden at midnight, they were in the midst of the race.

The race was the beginning of the forty-ninth hour of the race.

A 12 o'clock knockout of the race, and the winner was the man who rode forty-three miles in a day.

At 12 o'clock, the winner was the man who rode forty-three miles in a day.

SHEEPMEN TO ATTEND

Delegates Named For Livestock Convention.

GOVERNORS HEARD FROM

NEARLY EVERY STATE WILL BE REPRESENTED.

The wool growers of the mountain states will attend the national livestock convention in force. Those representing the Utah Wool Growers' association were appointed yesterday.

The sheep and wool growers' association of southern Idaho applied for membership in the national association and will send fourteen delegates to the convention.

The indications are that every state in the Union will be represented at the national livestock convention. Those representing the Utah Wool Growers' association were appointed yesterday.

NERVOUS PROSTRATION

is only a failure of strength.

It takes strength to get strength.

Get strength of stomach first.

Your stomach will then look out for your body.

Scott's emulsion of cod-liver oil enables your stomach to get it from usual food; and this is the way to restore the whole body.

We'll send you a little to try it for free.

SCOTT & BOWNE, 409 Pearl Street, New York.

BOOTBLACK ADDRESSES

LABOR FEDERATION

Louisville, Ky., Dec. 11.—When the convention of the American Federation of Labor came to order at 4 o'clock, President Gompers announced that a "gentleman wished to make an address this afternoon." Thereupon, a diminutive bootblack mounted the platform and shouted: "I want those scab bootblacks to keep out. I am a union boy, and I want them put out."

His "address" was received with yells of applause.

The report on the president's address contained the following recommendations:

"Higher dues; appointment of organizers; the chartering of legal and central bodies of colored people; in favor of strikes where they represent the only means for redressing grievances; for the collection of statistics relating to strikes and gains; and the closer cementing of the bonds between international unions; for the employment of an advertising solicitor for the Federation; and the Federation looks with favor upon the formation of 'trade groups'."

The report was unanimously adopted. A resolution for the establishment of the free school book system where not already in force, was adopted.

A resolution for the aid toward securing for the people of Porto Rico "freedom of assembly, of speech and the press."

A proposition to have translated into the Spanish language literature of the Bricklayers' and Longshoremen's, Painters', Cleaners' and Tobacco Workers' organizations for distribution in Porto Rico caused a stirring debate.

Delegate Fisher of the Tobacco Workers' union, speaking against the measure, said that "we have as many slaves in the tobacco factories of the south today as there are in Porto Rico."

The matter was referred to the executive council.

A resolution was introduced by John Mitchell of the United Mine Workers expressing sympathy with the Iron Moulders' union in its struggle with the National Foundry association against rules requiring members of the former union to work with non-union moulders.

Will Explore the Far South.

Christiana, Dec. 11.—Assistant Professor Nordenskjold of the University of Uppsala has arrived here to make preparations for his trip to the Antarctic region.

Mrs. Malin's Funeral.

The funeral of the late Mary A. Malin will take place at the Twelfth ward meeting house on Wednesday, Dec. 12, at 2 o'clock p. m.

Kitchen Necessities.

(Indianapolis Journal.)

"Cook, do we need any necessities for the kitchen?"

"Yes'm, I'd like a Roman chair, one of them Venushun lanterns, an' some more pillars for th' cozy corner."

Mine Experts on Stand In Judge Higgins' Court

(Special to The Herald.)

Nephi, Utah, Dec. 11.—Last Saturday Mr. Dickson said that they would be through their testimony on the part of the Grand Central by this evening, or tomorrow at the latest, but from the present indications it looks as though the Grand Central would not be through with their testimony till Friday.

At the noon adjourning hour, Ross J. Brown's cross-examination was still unfinished, and there is yet to be heard two of the Grand Central's leading experts, Colonel E. A. Wall and S. W. Tyler, the examination of each of whom, it is expected, will last a day.

Ross H. Brown, on resuming his direct testimony this morning, said that the occurrence of quartz in quantity in the immediate vicinity of the properties in question, or the lode in question, was an indication of the lode, even though it didn't contain any values, although he would not admit that as a conclusive sign of the approaching lode, because he didn't know that quartz does not occur in this district separated from its lode. In regard to subsidiary fissures, he answered the Betsy stopes the most important, and that is the one the apex of which is practically coincident with the north of that again in respect to the mineralization in the immediate proximity of the main lode, as evidenced by the fact that Betsy lode. As one proceeds to the north of the Betsy lode, the mineralization in this fissure ceases as ascertained by the assay values and the absence of quartz in most of the levels extending to the north of that line; but that this fissure at that point and beyond that point to the north in its mineralized condition enters the Betsy lode at the 1,100-foot level, and there it is coincident with the foot wall of the Finn dyke. He then thought a little about the fissure, and after extending a short distance, that the fissure weakens and the mineral dies out. He said that in addition to this subsidiary fissure there are several other subsidiary fissures which have a general course north and south, and there is a branch of the Betsy fissure extending a little more westerly than the fissure itself, and in addition to that there was what he termed subordinate fissure which is not a lode, but extending mainly to the south, and in which there is a considerable occurrence of ore shown.

In speaking of the apex of the vein he said it would leave the upper limit of the mineralization that is now spoken of. That upper limit is not determined throughout the entire length, but we have as far as the information goes, evidence to the effect that the fissure does not extend very far beyond the ore bodies; and these evidences are that the 700 cross-cut from the Grand Central shaft running to the east which intersects the foot wall of the Grand Central mine in the neighborhood of station 20, immediately entering the ore body, and from that point on to the west drift is entirely barren; that is, as soon as we pass through the limits of the ore occurrence on the station the lode is entirely barren. And on the Grand Central 700-foot level cross-cut extending into the Mammoth mine to the east, starting from station 72, there is ore at station 72 that occurs as thick as seven or eight feet, and as soon as we leave it, the ore is not there. It is nothing but barren lime. In a general way, he said, these cross-cuts in the line with the mineralization do not extend very far from the ore bodies to some places, he said, the development is not sufficient to show that, but that he had no doubt that the level of the dip of this lode is not very far above that line of stopes, and he regarded the stopes map as practically showing the course of the apex.

In speaking of the dip, Mr. Brown said that in attempting to determine the dip of an irregular deposit of ore sort without any well-defined boundary walls and a very irregular fissure, that one must have considerable development up and down in order to reach any approximation of the true dip. At the northern end of the Grand Central mine, there are developments extending from a short distance above the 500-foot level down over 500 feet in depth. And he thought in that case they were able to determine approximately the dip of the lode.

On cross-examination by George Sutherland, Mr. Brown said he could not give a short definition of a lode with any degree of accuracy. But he gave the definition of a plain fissure vein as simply the filling of a plain fissure with foreign material crystalline ore. By that he meant a single fracture; but two fractures going side by side, say, fifty feet apart, where the material between the fractures had been crushed and later filled with vein material, he would say was a lode; and using the word synonymously with the word vein, he would, of course, call it a vein. But speaking accurately, he would not call it a simple vein, but he might call it a complex vein, and even though two such veins are 200 feet apart he would still call it a complex vein. He said it was not necessary to constitute a vein that it should be mineralized throughout, that it might be barren in parts. Mr. Sutherland then went in at great length to try and get the witness to state definitely how he would fix the limits of a vein or the hanging and foot wall, but the witness would not state without knowing what kind of vein, but that generally speaking, he fixed the bound-

aries at the end of the mineralization.

The witness was examined upon the ore running north and south on the 400-foot level of the Mammoth, and then upon the ore running north and south on the 600-foot level in the Mammoth, and was asked the question, whether, judging from these occurrences of ore on these two levels, he would say that the strike of the vein was north and south instead of westerly, and he answered that, judging from those levels and the occurrences there, he would say that the strike was north and south.

Mr. Brown testified this afternoon that the strike of the lime beds in the locality of the main vein was from 40 degrees west in the southern part of the Mammoth to north 25 degrees west in the Grand Central. On re-direct examination, he testified that the lime beds on the 800 foot level near the point of connection struck north 50 degrees west with a dip 50 degrees northeast.

Colonel E. A. Wall was the next witness called. He had not examined the underground workings thoroughly, but had been over the surface of lot thirty-eight and said that he found no apex nor outcrop of any vein north of the Silverpolls south end line projected. He found two small fissures in the northern part of the Grand Central mine, and that fissure is not mineralized, but he found no indication of ore notwithstanding the fact that the fissure was the avenue which brought the ore up from the dip and that the large ore bodies were found upon them. He explained the change in the strike of the Betsy fissure from north thirty-eight north to north thirty-eight northerly to the Grand Central workings to a bend in the lime bed.

Sidney W. Tyler of Denver was then called as another expert. He testified that there was no apex nor outcrop in the Silverpolls south end line projected and testified further as to the general conditions both on the surface and in the underground workings. He was still in his direct examination when court adjourned.

TWENTIETH WARD FAIR.

Three Days' Event Will Be Opened Tonight.

Commencing this evening the people of the Twentieth ward will give a fair and festival to run for three nights, with a matinee on Saturday. One feature which is causing considerable interest is a voting contest for the most popular lady and gentleman in the ward. The voting commenced yesterday at the ward stores and the result last evening was as follows:

Lady.—Lucille Taylor, 75; Mella Hansen, 60; Aggie Campbell, 60; Margie Young, 55; Mrs. O. C. Beebe, 50; Geneva Clarke, 45.

Gentleman.—Walter Romney, 30; D. Lyon, 25; George Evans, 15; D. L. Muckel, 10; O. C. Beebe, 5; Geneva Clarke, 4.

The programme for tonight will include a solo by Miss Lottie Levy and recitation by Miss Maude May Babcock. Judge Powers will deliver an address tomorrow night.

A festival was given in the Four-

teenth ward assembly hall last evening to celebrate the fiftieth anniversary of Elder Andrew Jensen's birthday.

Real Estate Transactions.

Susan T. Simkins and husband to Annie Mills, 32 rods northeast from 4 rods west of southeast corner lot 3, block 34, plat F, \$80.
